4th August 2009

Breakthrough in carton sealing from Vikela Aluvin

Security sealing specialist Vikela Aluvin has taken carton sealing to the next level with the introduction of the newly patented SecuriTape system.

With the two-roll SecuriTape system, a secondary tape or identification seal, called a SecuriSeal, is inserted underneath the main adhesive tape used to seal cartons. If a carton is tampered with, this inner security seal breaks and the carton cannot be resealed in its original form, says Vikela Aluvin MD Kevin Norwitz.

A special printing wheel prints the SecuriSeal tape with unique company information only as it is being applied to the carton, to ensure printed rolls of tape cannot be swapped or stolen. Printing wheels can be uniquely coded, for instance with departmental or product codes, dates, etc. “By regularly changing this printed information, security is greatly enhanced,” says Norwitz.

In addition to a mobile hand dispenser unit available from Vikela Aluvin, the SecuriTape system can be attached to existing high-volume automatic and semi-automatic sealing machinery. It is suitable for tapes from 48 mm to 72 mm wide and all consumables, including primary sealing tape, SecuriSeal printing wheels and ink refills, are supplied by Vikela Aluvin.

The system is intended for use on any cardboard box with high-value contents, for instance in the FMCG sector and pharmaceutical industry. “The SecuriTape system delivers strength, security and a professional image, roll after roll, and the price of the two rolls compares favourably with that of normal printed tape,” says Norwitz.

The SecuriTape system is the latest innovation available from Vikela Aluvin, which is also the sole distributor in Southern Africa for E.J. Brooks, ITW Envopak and Mega Fortris, three of the largest security sealing companies in the world.
