

FOR IMMEDIATE RELEASE

Goscor's New Tennant T300 Scrubber Offers Innovative Nano Technology

Johannesburg - 17th August 2016 – Goscor Cleaning Equipment, part of the Goscor Group of Companies, released a new generation compact Walk-Behind Scrubber from the well-known Tennant range of cleaning equipment products, called the T300, which introduces enhanced operator ergonomics and exclusive Nano technology to meet the cleaning needs of a diverse range of environments.

According to Goscor Cleaning Equipment's General Manager, Greg Venter, the new T300 range is the first to include the next generation of successful, sustainable cleaning technology, known as ec-H2O NanoClean.

"Like the original ec-H2O, ec-H2O NanoClean technology electrically converts water into an innovative cleaning solution that cleans effectively, saves money and reduces environmental impact compared to daily floor cleaning chemicals," he added. "This converted water is created by an on-board e-cell that generates millions of microscopic bubbles—nanobubbles—per milliliter of solution. These nanobubbles then promote the cleaning efficacy of the solution."

The T300 and T300e Walk-Behind Scrubbers offer a selection of multiple machine configurations to optimise cleaning performance across many hard surface conditions. Configurations include single disk, orbital, dual disk, and dual cylindrical options. The T300 includes an integrated LCD touchscreen that provides simplified operation, as well as programmable zone settings, supervisor lock-out capabilities and on-board/on-demand videos to take the guess work out of the cleaning process.

Other key features that differentiate the T300 range is the improved and convenient hygienic tank, which allows for easy access when cleaning to help reduce mould, bacteria and other contaminants that can grow in enclosed tanks. The magnetic head allow pads and brushes to be quickly changed with minimal operator effort.

According to Venter, this new range from Tennant combines high performance, lower operating costs, operator ease-of-use and innovative features to help protect health and safety. “This customisable and flexible cleaning solution is ideal for multiple applications across the retail, hospitality, facilities management and other commercial environments.”
