

Legrand's wireless chargers for mobile devices have been designed to make life easier in a busy world – either at home, in the office, or when travelling.

These wireless chargers, with advanced technology, are ergonomic and functional, with versatility for use without cables in all environments and adaptable for specific needs.

According to the Legrand design team, all a user has to do is place a compatible mobile device on the wireless stand and it will automatically start charging. There is no longer the concern about a flat battery and being out of reach.

With this convenient charging system, it is not necessary to search for the right cable or an available socket.

The only requirement is the smartphone must be equipped with a Qi-standard induction charge receiver. This global standard now guarantees compatibility of all smartphones with induction charging and ensures the user has the best of the technology, without any connection constraints.

Legrand's wireless chargers are not only designed to charge a smartphone wirelessly, but a second device – a tablet, power bank or another mobile phone – can be charged simultaneously, by using a cable in the integrated USB port.

This practical system has a slim design for installation on a horizontal furniture surface like a kitchen counter, entrance hall dresser or bedside table, or it can be discreetly built into furniture, or flush mounted on a wall, to enhance the décor of the room.

For total mobility, Legrand designers – which are cognisant of the need for easy access to energy at all times - have made sure these robust wireless chargers can be used inside and outdoors.

Not only are these robust devices shockproof (IK8) but also weatherproof (IP66) and can withstand the demands of busy public places like airports, hotels, bars, restaurants, libraries and waiting rooms. They are also suitable for outside areas like patios, or areas near a swimming pool.

Legrand's commitment to the local market encompasses the launch of the latest products to ensure South African consumers are able to keep abreast with the latest global trends.

These new wireless chargers are available throughout the country from Legrand and its extensive distributor network.
