

Achieving Industrial Energy Efficiency

A 'hands-on' workshop offering practical solutions and tools to decrease energy costs and improve energy efficiency in your organisation.

How Eskom can Help You Implement an Energy Solution

In response to **the energy challenges facing South Africa**, Eskom has established an Integrated Demand Management (IDM) division. Energy Efficiency Demand Side Management identifies and promotes more **efficient electricity use** through **technology enhancements** and **behavioural change**.

Join Morne Begemann, Eskom's Project Manager for Integrated Demand Management, at the 2013 Energex Workshop to gain extensive insight on the state of the system, different models and most importantly:

IDM Funding Options

South Africa faces an energy constrained future. The country is more energy-intensive by between 35% and 65% than its counterparts. Most of this is a result of organisations using less energy efficient technology and production processes. There are massive opportunities for you to save energy, especially through technology.

Furthermore, local companies are set to be legally bound to adopt sustainable business practices with the likes of the impending Carbon Tax to be implemented in 2015.

Eskom's IDM programme makes funds available to clients wanting to reduce their consumption. Attend the Energex Workshop and learn about their incentives and programmes which include:

- Energy Management Programme
- Solar Water Heating Programme
- Energy Conservation Scheme
- Internal Energy Efficiency Programme and lots more...

Learn how to do More with Less!
