

Ingeteam connects 86 MW at twelve PV plants in France

- ⚡ The plants are located in the Southern regions of the country

Toulouse. December 18, 2013. Over the last months, Ingeteam has commissioned twelve PV plants in France, with a total power output of 86 MW. These plants are located in the southern-most part of the country and in the regions of Aquitaine and central Pyrenees. Ingeteam, which specialises in electrical engineering and in the development of frequency converters, motors, generators and control systems, is now strengthening its position as a leading inverter manufacturer in France.

Ingeteam first became established in France in 2010. Since then, the company has implemented some 30 projects of more than 1 MW and has participated in the commissioning of more than 240 MW. Specifically, Ingeteam supplied

inverters to 25% of the projects awarded by the Energy Regulatory Commission in mainland France and in French overseas provinces and territories.

In the course of 2013, Ingeteam was awarded some major projects in France comprising 156 MW of solar inverters supplied to the French market, in addition to service contracts in the wind-power sector and its involvement in the construction of a number of hydraulic works.

Ingeteam is a flexible company, capable of adapting to meet the needs of each specific project. This is reflected in the fact that Ingeteam is the first company to supply its French customers with 1 MW photovoltaic inverters. Furthermore, this year Ingeteam has also started up control cabinets for the telemanagement of the electrical grid in France (DEIE).

In order to provide optimal service, in 2013 Ingeteam doubled the personnel working at the company's facilities in France.

Ingeteam

Ingeteam is a market leader specialising in electrical engineering and in the development of frequency converters, motors, generators and control systems.

The company primarily serves four key sectors: energy; industry; marine; and rail traction. Its goal is to optimise energy consumption whilst seeking to maximise energy generating efficiency

The company operates in four continents (Europe, America, Asia and Africa), employing 3,000 persons.

In 2012, more than 7% of turnover was invested in R&D, the backbone of Ingeteam's business activity.
