

## ***FOR IMMEDIATE RELEASE***

### **Leon Engineering's cost-effective DIY weighbridge innovation to address different geographical and vertical needs.**

Leon Engineering is a leading European manufacturer of industrial weighbridges and scales having served the global weighing industry for over 30 years. The company's commitment to constant innovation has catapulted it into a major player in the global weighing industry.

Leon Engineering is proud to introduce its DIY Steel Transportable weighbridge, an innovative product that aims to transform and facilitate the weighing automation process across regional and industrial specifications.

The Steel Transportable Weighbridge aims to address the needs of customers with increased mobility requirements including temporary/rented sites within the mining, quarry, construction and agricultural industries. Its versatile structure comes in various adjustable lengths and capacities, while enabling the user to assemble the parts together on site. It includes pre-mounted load cells with two directional bumpers which reduces the installation time.

DIY's installation options can be tailored to soil conditions. It can be installed on prefabricated steel foundations directly on a concrete surface without the need of costly foundation investment. The product's removable covers on the top of the deck allow for easy access to the load cells and junction box. The weighbridge additionally incorporates the latest of Finite Element Analysis (FEA) technology. The optimum and robust weighbridge design achieved, ensures high durability and accurate functionality during its operation. The easy-to-assemble weighbridge features side modules that function as guide rails while its anti-slip chequer plate is used for the weighbridge deck.

The company more recently served various large resellers in India, while also operating in the Middle East, Africa and the Americas.

## ***ABOUT LEON ENGINEERING***

*Leon Engineering SA is a major European manufacturer of Weighbridges, Industrial Scales, Weighing Electronics & Systems and Weighing Projects customized to the special needs of its customers. Headquartered in Greece, the company boasts a worldwide network of partners and customers. With exports to more than 60 countries, Leon Engineering has evolved into a consistent top performer in Greece and amongst the top performing companies in Europe in the Industrial Weighing and Process Automation sectors.
