leuze 18b sensor series

FOR IMMEDIATE RELEASE

Introduction Of Leuze 18b Sensor Extends Range Further

Countapulse Controls reports that Leuze has expanded its already extensive line of sensors with the

recent introduction of the Leuze 18B sensor series. These high performance sensors have been

engineered for use in all applications involving transparent media.

Compared to its predecessor, the Leuze 18 series sensors offer even smaller dimensions in a much

more robust housing. Benefits include shorter response times, higher switching frequency, improved

adjustability of the switching point and a tracking function for extending the cleaning interval.

Engineered using the latest advances in sensor technology, the Leuze 18 series is able to reliably and

rapidly detect fast moving, small, thin and transparent objects such as foils. The major advantage is

that this can be accomplished even under extreme environmental conditions which is a game

changer in industries such as food and beverage and packaging.

The visibility of the light spot and the LED display have also been improved, and this has also

simplified the start-up and operation. The optics minimise light beam tolerances to the extent that

mounting can be quickly performed without alignment. The electrical connection is established

either via the M12 plug or the integrated cable.

Leuze sensors are available from leading sensor solutions company, Countapulse Controls.

LEUZE 18B SENSORS SERIES PIC 01: Countapulse Controls reports that Leuze has expanded its

already extensive line of sensors with the recent introduction of the Leuze 18B sensor series.
