

MB TEAM WINS at the World Demolition Summit 2014

It is the crown jewel of MB, the smallest of the range of crusher buckets, handy and compact. Thanks to this little gem *Made in Italy*, MB won the prestigious **Manufacturers' Innovation Award** at the **World Demolition Summit** in Amsterdam (6th November 2014).

Organized in collaboration with the magazine **Demolition and Recycling International**, this year edition had a particularly international flow more than ever before, with project and product from all over the world. The high quality of the companies nominated made very challenging the work of the jury to determine the winner in each categories.

Once again the MB-C50 triggered a remarkable result, in addition to **The Earth & Civil Contractor Awards** (Australian award of excellence in the construction industry which assigned the **PRODUCT INNOVATION AWARD**) and the special mention at the **Samoter 2014** in Verona for **Product Innovation**.

The MB-C50 is the smallest crusher bucket in the MB product line, weighing less than one ton and designed to work on excavators starting from 4 tons.

It is suitable for mini excavators and great for small crushing jobs.

Due to its reduced size and weight, the MB-C50 has proven to be particularly useful in landscaping and restricted areas, ensuring high performance in a small size with a production rate of up to 10 m³ per hour.
