

reuse

signature with Beijing Drainage Group of a contract to provide equipment for the HuaiFang reuse water treatment plant

a collaboration which demonstrates our commitment for the Chinese market

- **Equipment for the largest underground reuse water project in Asia**
- **The plant will treat the wastewater produced by over 3 million people**
- **Treatment capacity: 600,000m³/day since its commissioning**

In March 2015, SUEZ environnement signed a new contract worth over €144M with Beijing Drainage Group, a wholly state-owned wastewater utility established with the approval of the Beijing Municipal Government.

Our teams will supply to the HuaiFang reuse water treatment plant in Beijing, the ultrafiltration-membrane bioreactor technology and the ozone system used to treat the wastewater.

This technology enables the plant to produce optimum quality water, thereby contributing to the conservation of the natural environment receiving the outflow.

The wastewater treated by the Huai Fang plant may be re-used for city management projects or discharged into wetland and watercourse.

We will also supervise the commissioning and the testing of the equipment of the Huai Fang plant, operated by Beijing Drainage Group.

In Beijing, SUEZ environnement has already supplied the equipment for the wastewater treatment plants of Jiuxianqiao Beijing Capital Steel Group, Beijing Capital Steel Mining Company and the third drinking water treatment plant in Beijing.
