

FOR IMMEDIATE RELEASE

Wash It, Stack It, Sell It - Terex Washing Systems Stacking Up

Tuesday 24th November, Dungannon, N.Ireland - Terex Washing Systems (TWS) has enhanced their product portfolio with the announcement of the Terex AggreStac Conveyor Range. The launch took place as part of TWS Global Distributor Event in the prestigious Carton House Hotel in Maynooth, Ireland. This announcement was one of several new product and project services that distributors learnt about during the three day event.

The Terex AggreStac range currently consists of three options, 50ft, 65ft and 80ft. The TWS Design Engineering team considered a wide range of options and features in the new design to aid the customer, some of which included easy and low cost transport costs, which are reflected in the ability of the conveyors to ship in one 40' container, with track in, track out ability, eliminating crane costs and lengthy set-up times. The Terex AggreStac Conveyor Range shares similar innovative design features to that of TWS latest washing solutions and also comprises tried and tested components used in existing Terex equipment such as rollers, drums and drives. The design provides a full range of high specification options including full under belt and head drum guarding, radio control movement and setup where required. In addition the Terex AggreStac Conveyors are designed so they easily integrate with existing electrical and hydraulic control systems on TWS equipment. In addition it removes the need for TWS customers to use third party suppliers of auxiliary equipment and instead provides high quality, cost effective stockpiling equipment to complement TWS full range of washing and screening equipment. This makes for more manageable and effective project management, installation and commissioning of one complete washing solution for the customer.

The Terex AggreStac Conveyors have been developed in response to market research, whereby both global distributors and existing TWS global customer base were consulted as part of an insightful research

programme. Part of the research identified the need for enhanced stock pile solutions, which is now available through the new range as we continually aim to better serve customer's specific requirements.

Sean Loughran, Director TWS commented "This is yet another exciting venture for TWS and further enhances the TWS product range to include everything from quality feed products and modular wash plants through to enhanced stock piling solutions. This latest product development demonstrates our ongoing commitment to continually serve our customers' needs and responding to market demands. The machines are manufactured at the company's state of the art Terex facility in Bangalore, India and the project is the first step in a much bigger conveyor project aimed to serve the bulk material handling industry."

One of TWS distributors, Allan Kane, General Manager, Blue Machinery Scotland Ltd added "As a distributor for TWS the introduction of the new line of conveyors helps position us to better serve our customer needs in terms of providing them with a complete TWS solution. The new conveyor range adorns many features such as containerization for shipping, track in/track out and hydraulic controlled functions which will undoubtedly be attractive to our customers."

To find out more on the New Terex AggreStac Conveyor Range or to discuss your specific washing requirements, contact us at TWS.Sales@terex.com or visit our dedicated website which provides an overview of the full product offering at www.terex.com/washing
