

Eagle Reporting System is the best way to standardize your production.

Engineers from the Power-Tech company, producer of laser cutting systems, prepared an innovating reporting systems dedicated to operators of the machines. Software gives company a chance to more effectively make use of Eagle eVision and iNspire machines potential.

LOWERING COSTS OF WORK.

The biggest problem of laser cutting system is necessity of programming. Systems like these needs to be control by operators and they are not fully automatic. Eagle Reporting System allows to a remote control of a production, interposed changes, performance and efficiency of employees.

Furthermore, thanks to Eagle Reporting System software in Eagle eVision and Eagle iNspire laser cutting systems its users are able to monitor work, which means when and what programs and were made. Essential advantage of this system is ability to report about spare parts, for example nozzles or glasses. Moreover, eRS saves data and information about who exactly and when made software updates and programed machine.

PRODUCTIVITY GROWS.

As a result of the Eagle Reporting System capacity of Eagle cutting systems noticeable grows. Power-Tech successfully prepared this new software which is able to report machine's output by certain rates like division order, operators, shifts and even dates. In addition, eRS gives a possibility of sending e-mails to supervisor about unjustified stoppage and decreasing production speed. Outlined software is a total control over Eagle iNspire and Eagle eVision laser machines. Application of this software influences the productivity of machines but also operators.

ERS – CHANCE TO SAVE MONEY AND TIME OF YOUR COMPANY

Laser cutting systems are responsible for a very specific, complex and expensive technological processes. Machines like these should be properly programmed before starting a production. Thanks to Eagle Reporting Systems entrepreneurs will be able to maximally use a huge potential of them. The introduction of this system into the production process is extremely simple and intuitive, but can significantly improve efficiency and performance of cutters. The eRS software has also positive influence on operators and they productivity, because they can easily monitor status, performance or scores and compare it with the other workers. This in effect affects the achievement of better results for workers and stimulates the growth of production.
