Press Release: 13 April 2016

Fire! Fire! Everybody out! These chilling words could end in tragedy.

In the event of a fire, have you taken the necessary precautions to limit the spread of flames, heat and smoke, and significantly increase fire safety, resulting in sufficient time to evacuate an office block, shopping centre or hotel? These critical steps can save lives, reduce material damage, minimise business loss, protect the structure of buildings and keep them accessible after the fire.

Den Braven proudly presents the FireProtect® range for passive fire protection.

FireProtect® is a complete range of fully certified and approved passive fire products, for application in expansion and connection joints, openings and surface penetrations, between fire compartments.

Passive fire protection products are the primary materials included in the construction of a building. By correctly applying these products, the fundamental and legal requirements of compartmentalisation can be met. Additionally, they contribute to the structural stability of a building and provide time to safely evacuate or clear it. Passive fire protection limits the spread of flames and smoke, which also limits the transfer and spreading of fire between fire compartments.

The Den Braven Fire Protect range consists of an FP Acrylic sealant, FP Silicone sealant, FP Hybrid sealant and FP PU foam filler. Each of these specialised products can have fire retardancy of up to four hours and international fire certifications.

Den Braven is known as one of the leading developers and manufacturers of sealants, adhesives and PU expansion foams and is considered to be an authority in the field of dedicated concepts that provide complete solutions - locally and internationally.

For further technical specifications and fire certifications please see the technical data sheets available on the Den Braven website or call the Den Braven sales team for technical assistance.

Johannesburg: 011 792 3830, Cape Town: 021 552 9674, Durban 031 579 2375.
