**Hapman Expands Its Line Of Dust Collectors For Point-Of-Use
Airborne Particle Capture**

KALAMAZOO, MICH. – Hapman, a global manufacturer of conveyors and bulk material handling equipment with thousands of installations worldwide, announces the expansion of its dust collection line for point-of-use or batching applications. Each dust hood model comes with tool-less filter removal, gas assisted hinged door, reverse pulse filter cleaning and material capture, and MERV 16 rated filters (99.95% minimal efficiency @ .3-1 micron). The Hapman Dust Collection Series can come with an integral hopper or can be designed to fit an existing in-plant hopper. All units can be equipped with an optional Helix® Flexible Screw Conveyor. The FR series offers front panel access to two cartridge filters. Filters are removed by-hand using industrial-grade wing nuts. The SR Series houses a single filter with tool-less side panel filter access. Both of these units are standard, non-washdown duty. The FL Series is a washdown duty rated unit and the GB is equipped with integral glove box for applications where airborne dust is harmful or corrosive for the environment or operators.

“We have expanded our Dust Collector equipment line to accommodate the requests of industry”, notes Steve Grant, Hapman Product Manager. “Customers from food, and chemical, to building materials, and minerals processing are more conscious of airborne particles, even at lower PPM concentration. Operator safety, insurance and worker’s compensation, EPA regulations, cost reduction requirements, and overall environmental and sustainability efforts have all be drivers for the growing interest in capturing airborne particles when dry material is manually dumped,” states Grant.

Hapman offers its dust collection equipment as a stand-alone purchase or as a component within a material handling skid or system. Each piece of equipment is engineered to work seamlessly with new and existing equipment. Hapman supports its customers with a risk-free Performatee – a 100% operational guarantee that the equipment supplied will perform in-plant as designed.

For more details about the Hapman Dust Collection line, or to learn about the breadth of material handling equipment offerings visit www.hapman.com or call 800-427-6260.
