

**FOR IMMEDIATE RELEASE**

**Spectacular Showcase At Hillhead For Terex Washing Systems**

**Monday 18<sup>th</sup> July 2016, Dungannon, N. Ireland** – The spotlight was firmly on Terex Washing Systems (TWS) at the recent Hillhead Show, Buxton, UK, as TWS made a show stopping showcase at the world's largest working quarry show. The 2016 Hillhead exhibition proved to be a major success for TWS due to the tremendous interest in its products. The show provided the stage for the world premiere of the Terex® AggreScalp™ scalping unit, the Finesmaster UltraFines™ recovery system alongside the Terex® AggreSand™ 206 washing system.

TWS Global Business Line Director, Oliver Donnelly, commented “The reaction to our new products and our showcase was outstanding. We welcomed many dealers and their customers to our stand and provided them with the opportunity to speak with our experts in engineering, applications and sales. The new product launches is testament to our commitment to providing enhanced and unique washing solutions to meet customers' needs and specific washing demands.” Donnelly went on to say, “The new product lines at Hillhead will serve an increasingly diverse range of materials handling sectors. The AggreScalp™ unit brings operators a well proven, cost effective and durable machine in a modular all-electric format. This is ideal for C&D recycling applications as well as quarry and mine overburdens and integrates seamlessly with other key TWS systems including AggreSand™ and AggreScrub™. The UltraFines™ will tackle the increasing demand for fines recovery within numerous facets of the washing industry.”

**High Performance Electric Screening**

The Terex® AggreScalp™ is a versatile, high performance heavy duty electric screening machine that has the flexibility to operate as a 2-way or 3-way split screener. The highly aggressive screen can accept media including bofor bars, finger screens, woven mesh and 3D punch plates, which allows it to be used across a wide variety of applications. With onboard hydraulic folding product conveyors, hydraulic screen angle adjustment and single lift set-up, it remains easy to transport and easy to set-up. The AggreScalp™ can work in conjunction with the Terex® AggreSand™ range by providing a consistent feed material even in difficult applications. Together they form an efficient, lower operating cost aggregate and recycling solution

**Efficient Fines Recovery**

The Terex® FM UltraFines™ is a crucial step in efficient management and recovery of ultrafines sand from waste water streams, produced from washing processes. This ultra-fines recovery unit can process up to 450m<sup>3</sup> per hour of slurry recovering material as low as 40 micron, thus reducing the volume of solids reporting to storage ponds or water treatment plants. Bringing together a centrifugal pump, a cluster of 4 hydrocyclones and a high frequency dewatering screen on one chassis. The FM UltraFines™ also boasts a uniquely designed conical tank and anti-turbulence system, which is essential in the process of ultra-fines recovery.

Contact the TWS team today who can offer their unique combination of experience and expertise to customers seeking maximum efficiency, performance and serviceability from TWS materials washing equipment or log onto [www.terex.com/washing](http://www.terex.com/washing) to view TWS full product range.

**About Terex**

Terex Corporation is a lifting and material handling solutions company reporting in five business segments: Aerial Work Platforms, Construction, Cranes, Material Handling & Port Solutions and Materials Processing. Terex manufactures a broad range of equipment serving customers in various industries, including the construction, infrastructure, manufacturing, shipping, transportation, refining, energy, utility, quarrying and mining industries. Terex offers financial products and services to assist in the acquisition of Terex equipment through Terex Financial Services. **Terex uses its website ([www.terex.com](http://www.terex.com)) and Facebook page ([www.facebook.com/TerexCorporation](http://www.facebook.com/TerexCorporation)) to make information available to its investors and the market.**
