

Legrand's new intelligent Nuvo sound system solutions have been designed for access to a limitless gallery of music, with exceptional sound quality, that would be impressive to any composer of the music resounding throughout the home.

The Nuvo sound system is easy to create and customise - even for technologically challenged music lovers. This system is made up of audio Hi-Fi components, where the player amplifier is connected to a Wi-Fi certified router, or with wires to the home LAN network. At the push of a button - through a high quality digital signal flow - music is streamed from various online options, or accessed from a personal music library. This system is easily expandable by adding Nuvo Players to other zones, so there is different music blaring from various rooms in the house.

The Legrand Nuvo Player App allows system configuration and management of all functions through a Tablet or Smartphone. This App automatically downloads favourite music and artists for fast, easy browsing.

The in-wall keyboard controls functions like play, pause, volume, mute and track skip for quick and simple management of every audio environment. Even better is the added flexibility and easy control of the in-wall touchscreen. The P30 is a fully functioning seven inch Android tablet that provides seamless control of the Legrand Nuvo Player system.

The Nuvo system has the flexibility of three installation solutions – the wireless audio system and the wired system, or a combination of wired and wireless systems to provide the highest level of design flexibility.

This discrete wireless audio system - with a slim, compact design - has three available options. A player amplifier with a 40 Watt, 120 Watt amplifier, or a pre-amplifier player, that transforms an existing audio system into a performing Nuvo system. Bluetooth aptX ensures high fidelity streaming playback from personal devices and a USB port and line-in input are used to add new audio sources to the installation at any time.

Legrand's wired audio system, which can be expanded via the wireless system, is a professional solution for sound systems in rooms fitted with a LAN network.

These 3-zone players have a compact design for rack installation in a single module and are available in two flexible options – 3 x 40 Watt or 3 x 100 Watt players. USB port and line-in input are used to add new sources and line in/out per zone add power in the open spaces.

Every player amplifier combines a user's favourite digital contents, including online services and personal devices, in a single access point. Tabletop speakers and a player portfolio sound bar and subwoofer, enhance flexibility of this system to meet all sound requirements. With this system, users can create the ultimate audio experience, with four listening modes for movie, music, voice and night.

Nuvo high performance loudspeakers up to 120 W are manufactured from quality components to ensure sound excellence. Series 2 speakers, with silk dome tweeters and Polypropylene woofers, are recommended for areas where a balanced sound, with moderate volume levels, is needed.

Series 4 loudspeakers have aluminium tweeters and glass fibre woofers for sound clarity, while Series 6 Titanium speakers, with Carbon fibre woofers, provide maximum power handling and ensure dependable sound performance for large areas of the house.

Legrand's loudspeakers are designed for effortless flushmounting installation in ceilings, in plasterboard and brick walls, as well as in floors and cupboards. 4 mm thick finish grids adhere to the loudspeaker through magnets along the external frame.

All Legrand systems are enhanced by a comprehensive solutions-based service that also encompasses technical consultation and system support.
