VENETIA MINE

**Mining Machines Bring Mobile Classrooms**

*The learners of alldays primary school now have three new classrooms as a result of venetia mine's mining equipment which assisted them in relocating un-used mobile classrooms from alldays high school to alldays primary school.*

*Before these new classrooms 105 grade 5 learners shared a single class. The school's grade 1 learners experienced similarly crowded classrooms. These circumstances have been greatly improved by the mobile units which have reduced class sizes to just over fifty learners per classroom.*

*De beers provided a lowbed truck and crane and partnered with ravhuyani construction and projects who provided technical assistance to the alldays-based company khululute suppliers and construction and in so doing saved the school approximately r150 000 which is what it would have cost to hire a private company to transport the mobile containers.*

*"de beers and its contracting partners welcomed the opportunity to come on board as a partner to improve the learning environment for these learners and give them a better chance at achieving academic success" says corporate affairs manager, josephine pieters.*
