

PRESS RELEASE:

Verderflex hoses stand apart from competitors.

Verderflex pumps stand apart from their competitors- reliable, innovative, high performance peristaltic pumps that pump difficult products in tough conditions.

Verderflex pumps are renowned for providing top-quality solutions to an array of problems, within process industries around the world. Used in Original Equipment Manufacture (OEM) as custom solutions that can be incorporated wherever accurate dosing is required such as in vending machines.

The Smart and Scientific models are easily programmable tube pumps and ideal for use with chemicals or in a laboratory setting. This range is complimented by the industrial tube pump range. Specifically designed to be used in hazardous areas, they provide a compact pumping solution for automated systems as standalone pumps or as part of OEM.

These pumps have multiple power options and quick and easy tube change features. A range of tube materials are available to handle a range of different chemicals as well as hygienic options for food and beverage dispensing.

The Dura and VF hose pumps reliably pump the toughest fluids and are often found pumping slurry with high solid content from the mining industry to water plants.

The hose is the most important feature of any hose pump and Verderflex has designed its hose to be the longest lasting in the market, capable of withstanding corrosive and abrasive applications. The Verderflex hose can also be used in many other peristaltic pumps on the market, for more information visit the hose page.

Due to the more often than not hazardous nature of the products pumped by Verderflex hose pumps, the range had been designed to provide maximum safety to the workforce and environment. Both the VF & the Dura's hose connection is disaster-proof, totally containing the hose inside the pump casing – unlike other peristaltic pumps, eliminating any danger.

Verderflex pumps are incredibly accurate at dosing: they offer repeatable accuracy of $\pm 1\%$ without any slip. They also have a vacuum capability of 95% or a 9.5m / 31' lift of water. Our largest peristaltic hose pump can pump 90m³/hour or 390 US GPM at pressures up to 16 Bar or 230 PSI.

Ends

About Verder Pumps South Africa

The Verder Group comprises Verder Liquids and Verder Scientific, specialising in products and services for fluid handling and laboratories respectively. The Verder Liquids division comprises in-house Verder pumps, systems and services distributed by local Verder suppliers.

Manufacturing in-house allows the Verder Group to maintain the highest standards over the design, build and testing procedures, which reduces risk and costs to the customer. This provides the customer with a high-quality product at a great price.
