

FOR IMMEDIATE RELEASE

## **BALLEDGE® DESIGN GIVES APEX WELDING SCREENS SAFETY EDGE**

The patented Balledge® design used on Apex Welding and Safety Screens is a major advantage as this aids access into cordoned off areas for workers without snagging or scratching, increasing safety in the workplace.

Wim Dessing, managing director of Apex Strip Curtains, explains that the reinforced edge on the individual strips allows these to part easily, facilitating access for both personnel and equipment.

Locally manufactured Apex Welding and Safety Screens have contributed significantly to improved safety in many manufacturing facilities in southern Africa. The innovative p.v.c. screening material is used to cordon off welding and grinding bays.

Made from specially formulated material, which incorporates a heavy duty ultra violet light absorber, the Apex Welding and Safety Screens give end users assurance that dangerous u.v. radiation is safely contained in the curtained off area. This protects workers in close vicinity to welding and grinding activities.

Extensive tests conducted by the SABS proved the Apex Welding and Safety Screen material is superior to conventional material used for these products.

Tested for ultra-violet transmittance, the conventional material gave readings of 0,005%, 0,008% and 5.0% as opposed to the Apex readings of 0,005%, 0,001 and 0,005%. When tested for total visible light transmittance, the tests were conclusive - the conventional material allowed 78 % while the Apex material allowed only 15,5% light transmittance.

Apex Welding and Safety Screens are impervious to burning, and this is of particular importance should the material come into contact with welding splatter.

Available in several configurations to suit individual applications, the most popular version is the free-standing frame that facilitates both easy handling and portability. The screens' angled feet allow

optimum utilisation of the floor space as the screens can be butted together at 90 degree angles.

BALLEDGE ADV PIC 01 : The patented Balledge® design used on Apex Welding and Safety Screens is a major advantage as this aids access into cordoned off areas.

BALLEDGE ADV PIC 02 : Locally manufactured Apex Welding and Safety Screens have contributed significantly to improved safety in many manufacturing facilities in southern Africa.

BALLEDGE ADV PIC 03 : Made from specially formulated material the Apex Welding and Safety Screens give end users assurance that dangerous u.v. radiation is safely contained in the curtained off area.

BALLEDGE ADV PIC 04 : Apex Welding and Safety Screens are impervious to burning, and this is of particular importance should the material come into contact with welding splatter.
