Wacker Neuson introduces flexible and compact Light Tower Range LTS

Work on building sites often extends late into the evening or happens only after nightfall, especially when it comes to road and bridge construction, concreting or other events. A reliable light source is indispensable for these operations. Wacker Neuson's new LTS Light Tower emulates daylight very closely in its light quality, free of shadowing.

With the new LTS Light Tower, Wacker Neuson is showing yet again that compact dimensions and high performance can be combined successfully. Whether working in warmer conditions, avoiding heavy traffic volumes during the day or working with fresh concrete and finishing a project during the night - LTS Light Towers have the operating capacity for any area of application.

The adjustable vertical mast extends to more than eight meters in height and can be rotated 340 degrees. Four engine options with 50 or 60 Hz and the possibility to order two and three cylinder versions with a CE certificate makes the Wacker Neuson light tower applicable for a variety of applications, such as building sites, events and storerooms. The LTS Light Towers long servicing interval makes it an industry leader and ensures longer operating times and lower downtime.

There are two LTS models available: the LTS4K, with an efficient Kubota engine and kitted out with LED lights. The LTS8L is equipped with a powerful Kohler engine and has metal halide standard illumination. Additionally, the machines are made with a 60 Hz option.

The compact design and the vertical tower of the Wacker Neuson LTS towers facilitate the transport of up to 10 units on a standard truck. In addition, minimal space is needed on building sites, events and storerooms.
