

New Healthcare Clinic Paved By Technicrete

Health care clinics by their very nature have an enormous amount of foot traffic that requires safe, sturdy, attractive and long-lasting paving. The new Jouberton Community Clinic, a primary health care centre in Klerksdorp, North West Province, sought paving that offered these features and were cost effective. Technicrete, part of ISG, fitted the bill, with their JZZ pavers that were installed throughout the clinic surrounds.

“The quality of our JZZ pavers was the main reason our Technicrete product was selected” said Sales Consultant for Technicrete, Wian Blom, “We had recently utilised the JZZ paver at a project in Mafikeng, and when we showed the contractor, Trade First, the finish on the pavers they were very happy with the quality and contracted us to install these at the Jouberton Community Clinic” Blom commented.

Technicrete installed 7500m² of JZZ 80mm pavers as well as 2500m² of 60mm pavers all in a slate colour. These were installed alongside all the community clinic’s newly created driveways. “Additionally,” said Blom “We were then asked to install JZZ pavers to the adjoining road that services the community clinic. This is a project where a substantial amount of our pavers was required, and our nearby manufacturing factory in Stilfontein were able to ensure that the quantities needed were delivered as and when required by the project contractors” Blom said.

The Technicrete JZZ pavers is a solid block interlocking paver that once applied forms a continuous, hard wearing surface. They are suitable for municipal parking areas, domestic driveways, petrol forecourts, pedestrian pavements, pathways and commercial developments and industrial and factory roads. Any area that needs to accommodate regular feet and vehicle traffic, including delivery bays where forklift trucks are utilised, will find the JZZ paver a most practical and suitable surface.

Technicrete is part of ISG which also includes Rocla.
