

Impact of Industrial Automation on the Manufacturing Sector

Manufacturing Indaba 2019 and SAIMC Announce Launch of Automation Pavilion

FOR IMMEDIATE RELEASE

Johannesburg, 15 April 2019; The **Manufacturing Indaba 2019**, in collaboration with **The Society for Automation, Instrumentation, Measurement and Control (SAIMC)**, will provide an Automation Pavilion for those companies interested in exhibiting at this year's **industry-leading exhibition**.

The past two decades have seen drastic changes in the manufacturing landscape. The advent of smart computers and technology have rendered automation an essential element in gaining a competitive advantage in today's local and global manufacturing environment.

Industrial automation has brought about major advantages for companies and economies alike. Such as demonstrating increased productivity as mechanised equipment is not likely to tire or take breaks and will usually outperform humans in production operations and efficiency. This subsequently leads to reduced production time and increased levels of output.

The manufacturing industry deems quality and precision integral factors for the sector's success. Automated assembly processes are less inclined to make production errors or compromise production quality for speed. Machines are also able to perform tasks that the human body is incapable of. Contrary to popular belief, automated systems perform manufacturing operations with far less variability than human workmanship, leaving less room for error and yielding greater control and consistency in terms of product quality. Furthermore, improved control and consistency lead to more proficient use of materials, resulting in less wastage.

Automation is further responsible for reducing the time required to process an average production order through the factory, leading to lower production lead times and bottlenecks.

African countries need to develop capabilities for automation in the manufacturing sector by expanding access to broadband, investing in the technical upskilling of locals and endorsing technological innovation via vocational training and technology centres. Success in the aforementioned objectives will create unprecedented opportunities for the manufacturing sector and thereby overall African economies, through improving labour productivity in manufacturing industries.

Any business with a vested interest in the manufacturing sector should capitalize on this opportunity to showcase their innovative ideas, technology and solutions to manufacturers attending this year's Indaba. In addition, the symposium serves as a platform for attendees to network with influential members of the sector. The **Manufacturing Indaba 2019** is set to host a distinguished line-up of industry dignitaries, who will provide invaluable industry-related insights to a multitude of manufacturing professionals from across industries. Pertinent subjects regarding innovation and technologies as well as the best practices and case studies transforming the manufacturing space in Africa will be comprehensively explored.

PRESS RELEASE ENDS.

MORE ABOUT THE MANUFACTURING INDABA

THE MANUFACTURING EVENT FOR AFRICANS, BY AFRICANS

The annual Manufacturing Indaba will be hosted at Sandton Convention Centre, Johannesburg from the 25 - 26 June 2019. The two-day event has shown impressive growth year on year and has proved its value in catalyzing business connections and helping manufacturers to innovate and grow their potential. The aim of the annual Manufacturing Indaba and its provincial roadshows is to bring together manufacturers, industry leaders, government officials, capital providers and professional experts to explore opportunities and grow their manufacturing operations. The event is designed specifically for private and public company representatives to hear from industry experts as they unpack challenges and find solutions for growth across the manufacturing sectors and explore regional trade into Africa.

The event will comprise a two-day conference and exhibition and is hosted in partnership with the South African Department of Trade & Industry (**the dti**), the Department of Science & Technology and the Manufacturing Circle, representing the private sector.
