Yanmar Co., Ltd.

[Yanmar Energy System Europe Established as Full-Service Energy Solutions Provider](#)

Yanmar Co., Ltd. - Sep 26, 2019 04:43 GMT

Frankfurt, Germany (September 25th, 2019) - Yanmar has announced the establishment of Yanmar Energy System Europe GmbH (YESE), a full-service energy company that will provide advanced, full-service solutions to customers in Europe in gas-powered generation, and heating, ventilation and air conditioning (HVAC).

The establishment of the company follows the Eschenfelder KKU Group's move to join the Yanmar Group in April 2019. As a specialist in the design, engineering, distribution and installation of resource-saving refrigeration, cooling and heating solutions for trade and industry, KKU joined with Yanmar group company, Yanmar Energy Systems Co. Ltd (YES), a leading force in development, production and distribution of gas engine heat pumps, chiller and cogeneration solutions for the HVAC industry worldwide, to provide development and manufacturing capabilities that enable production of tailor-made solutions for complicated situations where standard solutions fall short.

"The establishment of this new company consolidates Yanmar's wide-ranging energy systems portfolio and capabilities under the one roof," said YESE CEO Yosuke Tajima. "We can now offer full-service, customized solutions to customers across a broad spectrum of gas-powered generation and HVAC applications." He added: "This move further positions Yanmar for significant growth in European markets by realizing synergies between company functions and optimizing pan-European business management."

Headquartered in Marl, Germany, the new entity will enable Yanmar to strengthen its development activities to further expand tailor made solutions for its energy customers in Germany and the rest of Europe.
