## Inclledon launches latest Tekflo nylon ball and check valves

**18 November 2019:** Nylon ball and check valves designed and developed for irrigation and agricultural applications have been introduced by [Inclledon](#), a leading provider of quality fluid conveyance products and solutions.

Featuring a nylon body with a steel ball and stem, Tekflo nylon ball valves are particularly suited for such arduous applications in that they are resistant to hydrocarbons and various harsh chemicals. The valves have a nominal pressure of 1.6 MPa, with a working temperature of –20°C to 120°C, and are available in sizes from 15 mm to 50 mm.

Additional features include a low thermal conductivity, a higher corrosion resistance than traditional metal, a light weight for easy installation, high resistance to freezing and high temperatures, a high UV resistance, a low material cost compared to brass, and a BSP thread.

With similar features and applications, Tekflo nylon check valves boast a nylon body, a polycarbonate disc, a SS304 spring, a BSP thread, and a working temperature range of –20°C to 120°C. Suitable for use where water is a medium, the valves are designed to handle a nominal pressure of 1.6 MPa.

Inclledon distributes products utilised in the conveyance of water, gases and liquids. It has the largest and widest consolidated quality product offering in order to service the diverse industries it operates in and is well-positioned to take advantage of the government's infrastructure development programmes.

Today Inclledon has branches in every major South African city, with a formidable national footprint, including Bloemfontein, Upington, Cape Town, Durban, East London, George, Johannesburg, Mbombela, Polokwane, Port Elizabeth, Secunda and Rustenburg in order to ensure that customer service remains the top priority.
